

- SEED ROUND 2025

BlockDrive

Zero-Knowledge Cloud Storage for the New Internet

Trustless Privacy & Compliance Infrastructure via Programmed
Incompleteness

RAISING

\$2.5M

Tiered SAFE · \$18M – \$22M Cap

The Centralized Storage Paradigm is **Broken**

Users surrender encryption keys to providers like Google & Dropbox. "Encryption at rest" is a fallacy when the provider holds the keys.

SYSTEMIC VULNERABILITY

Every major cloud provider stores complete, reconstructable data. A single breach exposes everything—encryption keys included.

THE COMPLIANCE GAP

90% of enterprises remain centralized due to fear. Decentralized alternatives lack performance & compliance tools required for adoption.

54

Records Compromised

Every second, globally

1.7B+

Annual Records Exposed

The Root Cause: Traditional providers *can* access your data—so attackers can too. The model is fundamentally broken, not just poorly implemented.

The High Cost of Vulnerability

When centralized providers get breached, the fallout is catastrophic—and increasingly common.

RECENT CATASTROPHIC BREACHES

AT&T Data Exposure

CRITICAL

73M+ records including SSNs. Massive blow to operational integrity and customer trust.

Global Credential Collapse

CRITICAL

16 Billion records compromised via infostealer malware in a single 2025 event.

AVG US BREACH COST

\$10.2M

↑ 9% year-over-year

16B

Records in single 2025 event

73M+

AT&T SSNs exposed

The BlockDrive Solution: We can't lose what we don't hold. Zero-knowledge architecture means zero breach exposure.

Programmed **Incompleteness**

We don't just encrypt data.

We make it **mathematically inert**.

1. THE "MISSING 16 BYTES"

We strip the Initialization Vector (IV) from every file before upload. This critical piece is encrypted separately and stored in a ZK proof—inaccessible without your wallet.

2. DIGITAL DUST

Without these bytes, the data stored on the cloud is useless cryptographic garbage—impossible to reconstruct even with unlimited compute.

3. ZK VERIFICATION

Zero-Knowledge Proofs verify you possess the correct bytes without revealing them. Only your wallet can unlock the proof and reconstruct the file.

16

Bytes that change everything

THE RESULT

Even if attackers breach our servers,
they get nothing usable—just
cryptographic noise.

Why BlockDrive

REDUCED VENDOR RISK

Clients can demonstrate to regulators that their storage provider architecturally cannot expose their data if their internal system is breached—reducing third-party risk in compliance audits.

Zero

RECONSTRUCTABLE DATA ON
ANY SINGLE SERVER

Eliminating any single point of failure

Breach-Proof Architecture

Keys are derived locally from your wallet and never stored—anywhere. All data on our servers is encrypted with wallet-derived keys. **Without your wallet, nothing can be reconstructed.**

Provider Immunity

BlockDrive cannot be compelled to produce client data because we architecturally cannot access it. Clients maintain full control and compliance obligations—we simply can't be a point of failure. **Reduced third-party risk for your clients.**

Compliance Ready

On-chain audit trails provide immutable proof of data handling. Document the air-gap architecture for regulators, auditors, and insurance underwriters.

Privacy-Sensitive Cloud Storage

20% of the \$130B+ cloud market where zero-knowledge architecture solves acute pain

TOTAL ADDRESSABLE MARKET

Privacy-sensitive verticals: Legal, Healthcare, Financial Services, Family Offices, Web3

\$25–35B

25-30% CAGR

SERVICEABLE ADDRESSABLE MARKET

US SMB & Mid-Market in target verticals

\$4–8B

YEAR 1 OBTAINABLE

Crypto/Web3 companies + crypto-focused law firms

\$10–25M

25–30%

SEGMENT CAGR
vs 22% general storage

\$10.2M

AVG US BREACH COST

Miami

GLOBAL CRYPTO LAW HUB
+ 59K Web3 companies

Why Now: <10% of enterprises encrypt 80%+ of cloud data · 20 US states with privacy laws · 68% of financial firms cite security as top cloud barrier

The Magic Quadrant

Combining Web2 Usability with Web3 Sovereignty

FEATURE	BLOCKDRIVE	DROPBOX / BOX	FILECOIN / STORJ	INTERNXT
True Privacy	✓ Zero-Knowledge	✗ Keys Held	⦿ Node Risk	⦿ Standard E2EE
Usability	✓ Web2 UX	✓ High	✗ Dev Focused	⦿ Medium
Speed	✓ Instant (Solana)	✓ Instant	✗ Slow	✓ Fast
User Sovereignty	✓ User Owned	✗ Rented	✓ User Owned	⦿ Partial
Liability Position	✓ Air-Gapped	✗ Full Liability	⦿ Gray Area	⦿ Gray Area
Provable Deletion	✓ On-Chain Proof	✗ Trust-Based	✗ No	✗ No
Small Team Support	✓ Any Size	✗ 3 Seat Min	✗ Enterprise Focus	✗ Technical Setup

PRICING TIERS

PRO	POWER USER	SCALE ★	MID-MARKET	ENTERPRISE
\$9	\$49	\$29	\$39	\$49
/month	/month	/seat/mo	/seat/mo	/seat/mo
200GB	2TB	2-seat min · 1TB	50-100 seats	100+ seats
~85% margin	~70% margin	~80% margin	~82% margin	\$39 multi-yr

Billing: Monthly · Quarterly (~1 free month) · Annual (~2 free months)

GTM: Land & Expand

PHASED MARKET EXPANSION

YEAR 1

Crypto Beachhead — Establish PMF

Current

Crypto/Web3 companies + crypto-focused law firms. Same buyer persona, built-in referral flywheel (lawyers ↔ clients), concentrated in 4 hubs.

YEAR 2

Vertical Expansion

Expand to adjacent privacy-sensitive verticals: healthcare practices, family offices, general legal. Same playbook, proven with crypto.

YEAR 3

Enterprise Push

Full enterprise motion with SOC 2, dedicated AEs, mid-market expansion (50-200 seats), compliance certifications.

THE "POWER DUO" DIFFERENTIATOR

Unlike Box (3-seat min), we serve teams of **any size**—including 2-person partnerships. A unique wedge for co-founders, boutique firms, and investment partnerships that competitors ignore.

PHASED MARKETING SPEND

M1-2: Foundation **\$5K/mo**

Organic + launch · Gate: 20+ beta signups

M3-4: Testing **\$10K/mo**

Paid experiments · Gate: PMF signal

M5-12: Scale **\$12.5-20K**

Double down · Gate: CPV < \$2.00

Sales Motion:

Founder-led M1-12 → First SDR M13 → First AE M15

The 4-Hub Launch Strategy

Florida-first expansion across America's crypto power centers

PRIMARY

South Florida

Miami · Ft. Lauderdale · Palm Beach

Target: Crypto Funds, DeFi Teams, Web3 Startups, Crypto Law Firms

PITCH: "LatAm Gateway"

Cross-Border Compliance & Privacy

Home market. Deep network. America's crypto capital.

SECONDARY

New York

Manhattan · Brooklyn

Target: Crypto Hedge Funds, Digital Asset Counsel, Token Projects

PITCH: "Institutional Grade"

SEC/CFTC Compliance & Audit Trails

Highest concentration of crypto legal expertise. Institutional capital hub.

SECONDARY

San Francisco

Bay Area · Silicon Valley

Target: Protocol Teams, Crypto VCs, L1/L2 Foundations, Web3 Counsel

PITCH: "Infrastructure"

Developer Tools & Protocol Integration

Global HQ for protocols, crypto VCs, and AI-crypto convergence.

SECONDARY

Austin

I-35 Corridor · Tech Triangle

Target: Bitcoin Maxis, DeFi Devs, Crypto Startups, Texas Crypto Counsel

PITCH: "Freedom Tech"

Sovereignty & Self-Custody Ethos

Fastest-growing crypto hub. Pro-crypto regulatory environment.

Strategy: South Florida primary focus from Day 1—our home market with deep network effects. NY, SF, and Austin active simultaneously as secondary markets. All 4 hubs operational Year 1 → Scale winning markets with first SDR hire (M13+).

Organic Layer: Self-serve Pro tier (\$9/mo, \$90/yr) and Power tier (\$49/mo, \$490/yr) capture crypto power users at zero CAC—bottoms-up funnel to B2B (individual → founder → company).

The Sovereign Stack

Three layers, each optimized for its purpose.

LAYER 1

Solana

Speed Layer — Identity & access control via PDAs. Sub-second finality.

\$0.00025/tx

LAYER 2

AWS S3

Reliability Layer — ZK proofs + missing 16 bytes only. 99.99% uptime.

0.1% of data

LAYER 3

Filebase

Cost Layer — Bulk encrypted storage at wholesale. Zero privacy risk.

~\$0.004/GB

Gasless UX

Dropbox-like experience. Users sign off-chain, we handle gas.

NFT Subscriptions

Membership as SPL tokens.
Censorship-resistant by design.

Open Recovery

Python SDK for independent data retrieval if we shut down.

Multi-Chain Ready

Architecture supports Ethereum, Polygon expansion.

Leadership Team

Sean Weiss

Co-Founder & CEO

- 3x Founder with elite institutional network
- Proven track record in high-ticket client acquisition
- Spearheading GTM initiative as Head of Sales in Year One
- Background: Award-winning private wealth manager

Roberto Cinque

Co-Founder & CTO

- Architect of "Programmed Incompleteness"
- Deep specialization in Rust, Solana Smart Contracts
- ZK-Proof implementation expertise
- Full Stack Systems Engineering

How It Works

Cryptographic Layer

- Wallet-derived encryption keys
- AES-256-GCM client-side
- 16-byte IV extraction
- Deterministic derivation
- No key escrow ever

Zero-Knowledge Layer

- ZK proof generation client-side
- On-chain commitment hash
- Encrypted embedding
- Verifiable without reveal
- Groth16 circuits

Solana Layer

- Program Derived Addresses
- UserVault hierarchy
- Sub-second finality
- \$0.00025/transaction
- Hierarchical sharding

Storage Layer

- Multi-provider hybrid
- Automatic S3 fallback
- Cold-tier migration
- 73% cost reduction
- Geographic redundancy

Moat Analysis

Cryptographic Moat

16-byte extraction creates information-theoretic security gap that cannot be replicated without wallet-level integration.

Width: WIDE

Infrastructure Moat

Solana PDA architecture + Filebase integration creates switching costs. Multi-chain expansion adds complexity.

Width: MEDIUM-HIGH

Legal/Compliance Moat

First-mover on provable deletion creates regulatory relationships and legal precedent for liability exemption.

Width: HIGH

Key Differentiator: We store mathematically incomplete data. Even with unlimited compute and full cooperation, reconstruction is impossible without the user's wallet. Competitors store complete encrypted files—we store digital dust.

Technical Moat: Our "Programmed Incompleteness" architecture combines ZK-circuit engineering with low-level byte stripping—a novel approach that generic cloud providers cannot easily replicate. Patent filings planned post-funding to protect core innovations.

Roadmap to Series A

NOW

MVP Development

- Core encryption pipeline
- Solana PDA integration
- Web app MVP
- Internal testing

Launch: Jan 2025

YEAR 1 (M1-12)

Crypto Beachhead

- Crypto/Web3 + law firms
- 4-hub launch (SFL primary)
- Product-market fit
- Referral flywheel

Target: \$1M ARR by M12

YEAR 2 (M13-24)

Vertical Expansion

- Healthcare, family offices
- First SDR hire (M13)
- General legal vertical
- SOC 2 certification

Target: Adjacent verticals

YEAR 3 (M25-36)

Enterprise & Mid-Market

- 50-200 seat expansion
- First AE hire
- Enterprise features
- Series A raise

Target: Series A

Exit Landscape

PRIVACY PIVOT

Dropbox, Box, Microsoft

Instant Zero-Trust tier for enterprise. Bolt-on acquisition for compliance gaps in existing product lines.

ECOSYSTEM NATIVE

Solana/Saga, Brave, Phantom

OS-level storage integration. Native Web3 storage primitive for next-generation platforms.

SOVEREIGN TECH

Proton, NordVPN, 1Password

Privacy bundle expansion. Natural fit with existing privacy-first product suites.

Comparable Transactions:

Boxcryptor → Dropbox (2022) · Skiff → Notion (2024) · SimpleLogin → Proton (2022)
